

3 WAYS TO BOOST SAFETY IN MANUFACTURING

ORGANIZE A DETAILED DISCUSSION WITH EMPLOYEES

Establish a good communication between employees and the employer. A toolbox talk is an effective way to communicate potential hazards and critical update.

IMPLEMENT REGULAR MACHINE INSPECTIONS

Before commencing work, perform basic checks to have an overall evaluation of equipment and production tools, and to ensure a safe environment for employees.

ergonomic safety

CONDUCT ANNUAL REFRESHER TRAINING SESSIONS

Training is important to promote safety and quality in the workplace. Annual refresher training programs ensure all operators are up to date with safety measures so they can avoid serious injury and other incidents.
